DID YOU KNOW

While all **Acemannan** is found in the inner leaf gel of the Aloe plant, not all inner leaf gel is Acemannan?

Acemannan is defined as requiring a molecular weight of one to two million Daltons.

Manapol is currently the only Aloe powder in the world with a weight more than one million Daltons, testing the highest of any other similar product in a controlled test.

Why is that important? Manapol not only provides a purer form of Aloe vera gel powder that has a higher molecular weight than others, but it is also richer in mannose, a key Glyconutrient.
