

About Mannatech's Uth™ Advanced Skin Matrix Rejuvenation Crème

Insight From Mannatech's R&D Department

Tell Me about Mannatech's Uth Advanced Skin Matrix Rejuvenation Crème

Mannatech's Uth™ Advanced Skin Matrix Rejuvenation Crème, designed to meet the skin care needs of men and women 20 years and older with all skin types, is rich in cellular communication supporting glyconutrients, a nutrient category unique to Mannatech. Uth also contains a wide array of natural botanical ingredients that can help maintain healthy-looking skin and fight signs of aging.*

Launched in 2013, Uth Advanced Skin Matrix Rejuvenation Crème provides an advanced approach to reducing troublesome signs of skin aging by improving the extensibility, resiliency and elasticity of skin and further reducing the appearance of fine lines, wrinkles and uneven pigmentation. To support deeper penetration, we spherinized our signature glyconutrient from aloe vera gel, Manapol[®] powder, with other botanically derived glyconutrients that have been shown in preliminary studies to support the health of the skin matrix. Additional advanced botanical ingredients were selected because they have been shown in laboratory studies to increase the water-binding capacity of skin surface cells and subsequent circulation of water deep into the skin.

What Clinical Studies have Evaluated the Effects of Uth Advanced Skin Matrix Rejuvenation Crème?

While the FDA does not require that cosmetics be tested for safety or efficacy, Mannatech has chosen to submit all of our cosmetic products for human testing to a

company with recognized expertise in this area: Thomas J. Stephens & Associates, Dallas, TX. Results of these studies, along with data collected from our ongoing Product Safety Monitoring Program, indicate that all of Mannatech's skin care products, including our facial products, are safe and effective.**

Visual grading by a qualified expert revealed significant improvements in the appearance of skin firmness, fine lines and wrinkles, age spots and tone after just 8 weeks of using Uth Skin Rejuvenation Crème. Cutometer measurements indicate that the product significantly improved skin resiliency, elasticity and firmness. Study participants were very positive about Uth Skin Rejuvenation Crème, reporting that their skin felt firm, had an even texture and tone and a reduced appearance of fine lines and wrinkles.

What Can I Expect to Experience From Uth Advanced Skin Matrix Rejuvenation Crème?

The skin, our body's first line of defense, can be easily damaged by external factors (e.g., sunlight and air pollution) and internal factors (e.g., cigarette smoking and poor diets). These factors can accelerate skin aging and contribute to dullness, dryness and the appearance of fine lines and wrinkles. To protect skin, it's important to stay away from these free-radical producers, keep the skin hydrated, use sun protection and eat a healthy diet rich in fresh fruits and vegetables. Uth Advanced Skin Matrix Rejuvenation Crème has been validated by human clinical studies to be safe and may minimize many of the most troubling signs of aging and can be very beneficial to the overall health and appearance of the skin.*

	Safety			Efficacy				
	Hypoallergenic	Does not clog pores	Safe for use around the eyes	Visual grading			8 week cutometer measurements	
				Reduced appearance of fine lines and wrinkles	Improved tone	Improved firmness	Improved smoothness	Improved elasticity, resiliency and extensibility
